

July 25th, 2016 (Updated 10/25/18)

StudioLive AI Speaker Firmware (v8057) Release Notes

Firmware update v8057 for StudioLive AI speakers implements an adjustment to the Dante audio input level so as to more closely match Analog audio input level when the same source device is used for both Dante and Analog audio. No other changes were made in this firmware version.

Firmware v8057 Supports All StudioLive AI Speakers:

- StudioLive 328AI
- StudioLive 312AI
- StudioLive 315AI
- StudioLive 18sAI

Important Notes

- If you already have a Dante card installed and have therefore previously performed a firmware update when the Dante card installation was done, you can then update your StudioLive AI speaker to this firmware version using the standard firmware update method, which you will see when you download the new firmware from [MyPreSonus](#).
- If you are installing a Dante card for the first time while updating to this software, you will need to follow the [firmware recovery method](#) as is always necessary when first installing a Dante card in a StudioLive AI speaker
