### **Known Issues**

- Windows' Sound Properties setting for device Sample Rate will no longer follow a change of the Sample Rate setting in Universal Control:
- If the user changes the Sample Rate in Windows Sound Properties, it will cause the Sample Rate setting in Universal Control to change.
- If the sample rate of Windows and Universal Control do not match, playing any system audio with Windows (i.e. Media Player, Youtube, system sounds, etc.) will force Universal Control to the Sample Rate set in Windows.
- Users are advised to manually make sure the sample rate settings match in Windows Sound Properties and in Universal Control in order to ensure the best experience and functionality.
- When the StudioLive 24.4.2 Subgroup Delay time is between 1050 ms, the last digit is partially cut off
- Non-Western Characters in the name of iOS device will show up in the VSL Remote Devices Section as ??????
